Installation

The RIS215\_1H71\_Littlehampton\_to\_Haywards\_Heath.zip file should contain 4 files:

this readme

RIS215\_1H71\_2214\_Littlehampton\_to\_Haywards\_Heath.rwp

RIS215\_1H71\_2214\_Littlehampton\_to\_Haywards\_Heath\_Scenario\_Briefing.pdf

RIS215\_Stock\_List.pdf

To install the rwp file, run the Train Simulator Utilities program from your Steam\SteamApps\common\RailWorks\ folder. Once the Utilities program is running, click the package manager tab at the top of the screen followed by the Refresh button on the right hand side. Once the refresh is complete, click the Install button on the right hand side, navigate to the location where you unzipped the RIS215\_1H71\_Littlehampton\_to\_Haywards\_Heath.zip file, select the rwp file and click the Open button. This should install the scenario. More details on installing 3<sup>rd</sup> party content in TSC can be found at [3rd Party/Freeware Installation Guide](#).

Notes

This scenario has been built around the player adhering to the given maximum speed and following the given schedule. Without those elements, the scenario may not play as intended.

As this scenario is released there are signal problems on the route at Littlehampton. The semaphore signal at Littlehampton station do not work and there is a repeater signal that shows a constant Green + Yellow aspect at the same time. The route author is aware & is working to fix the problems in a future update. If you run this scenario before the route update is released then you will need to request permission to pass the first signal as you leave Littlehampton station. The repeater signal can be ignored.

When I was creating an earlier scenario that used the AP Class 377/379/387 Enhancement Pack there were a number of passenger trains sitting in sidings that are supposed to be empty but had passengers sitting inside them. Every time I ran the scenario I thought it looked incredibly unrealistic and there were no versions of the rolling stock that didn't have passengers. Therefore, I created my own versions of the rolling stock in question and used them. It gives a much more sensible view as you pass the items. I have included the changed bin files for the rolling stock in the folder titled Additional Bin Files which also

includes instructions on what to place in what folders in your RailWorks\Assets folder. As always, RIS215\_Stock\_List.pdf has details of the paths used for all rolling stock so you can double-check to ensure you have the items the scenario requires but everything is easily swappable in either TS\_Tools or LocoSwap.
