## Notes

This scenario has been built around the player adhering to the given maximum speed and following the given schedule. Without those elements, the scenario may not play as intended.

I have used the 3DZug Ealnos GBRf wagons & associated enhancement pack because I purchased the pack long before Armstrong Powerhouse subsequently released their version of the wagon. If you have the AP pack it should be simple to swap the wagons over although you would need to be careful to make the wagons are similar particularly in terms of length. The other wagons in this scenario are used to represent what you would see in sidings so could be replaced with anything currently in use on the UK network if you don't have the items I've used and don't want to get them. As always, RIS232\_Stock\_List.pdf has details of the paths used for all rolling stock so you can double-check to ensure you have the items the scenario requires but everything is easily swappable in either TS\_Tools or LocoSwap.
