Installation

The RIS202_1Z45_Banbury_to_Marylebone.zip file should contain 5 files:

this readme

RIS202_1Z45_1317_Banbury_to_Marylebone.rwp

RIS202_1Z45_1317_Banbury_to_Marylebone_Scenario_Briefing.pdf

RIS202_Scenery_List.pdf

RIS202_Stock_List.pdf

To install the rwp file, run the Train Simulator Utilities program from your Steam\SteamApps\common\RailWorks\ folder. Once the Utilities program is running, click the package manager tab at the top of the screen followed by the Refresh button on the right hand side. Once the refresh is complete, click the Install button on the right hand side, navigate to the location where you unzipped the RIS202_1Z45_Banbury_to_Marylebone.zip file, select the rwp file and click the Open button. This should install the scenario. More details on installing 3rd party content in TSC can be found at [3rd Party/Freeware Installation Guide](#).

Notes

This scenario has been built around the player adhering to the given maximum speed and following the given schedule. Without those elements, the scenario may not play as intended.

The Rail Adventure repaints of the Class 43 and the Major Wales Design Class 43 Revamp Pack both require the AP Class 43 (MTU)/Mk3 Enhancement Pack which has been discontinued. If you purchased the pack previously then this scenario should work OK as long as you have the revamp pack & the Rail Adventure repaint installed. The new AP Class 43 (MTU)/Mk3 Enhancement Pack is likely to be replaced in the very near future so, when it is released, I will be revisiting this scenario to establish what impact (if any) the replacement pack has on the scenario running. For example, the previous AP pack installed items to the RailWorks\Assets\Kuju\RailSimulator\RailVehicles\Diesel\HST folder. If the new AP pack also does the same (and overwrites existing items in that folder) then it may break the Rail Adventure repaint and this scenario will not work. However, if the new AP pack installs to the RailWorks\Assets\AP folder and leaves the older items in the Kuju folder as is then this scenario should work as it does at release.

Although the JT Chiltern route comes with versions of the Class 68, Mark 3 coaches and the Chiltern DVT I used the items from AP & Vulcan Productions and the route also comes with an AI version of the S8 underground stock but I used the stand-alone version because I thought the AI version looks terrible. Finally, I used the 1972 tube stock included in the Virtual District Line to represent Jubilee Line Trains. I know it's not accurate but I felt it was a reasonable representation of the correct rolling stock. However, there are no trains on the Central Line section of track as I could not find anything that I felt looked reasonably accurate. As always, RIS202_Stock_List.pdf has details of the paths used for all rolling stock so you can double-check to ensure you have the items the scenario requires but everything is easily swappable in either TS_Tools or LocoSwap.

This scenario does feature lengthy stops for the player train. If you do not wish to be stationary for an extended period of time I would suggest running the game with the ASYNC keys shortcut active which will allow you to accelerate time in-game.

This scenario does include static scenery items which are not be critical in any way to running the scenario. If you don't have the items installed then you should be able to run the scenario but the scenery items will not appear as intended. RIS202_Scenery_List.pdf has details of the paths used for all scenery items used so you can double-check you have the items the scenario requires if you wish.

Feedback

I always welcome feedback so if you have any questions or constructive feedback on this scenario then you can leave a comment either on the download page for the scenario itself at <https://anakhastscenarios.com> or on the Anakha's TSC Scenarios thread at the Railworks Forum at <https://rail-works.freeforums.net/thread/1583/anakha-tsc-scenarios>.
